

**Letter to the Editor****Another Longevity Gene**

In *Thammasat Med J* 2019; 19 (2): 447, the Letter to the Editor entitled *Longevity Gene* contained a citation that *DRD4 7R allele* was a longevity gene. I would like to add that *KLOTHO* gene variant has also been referred to be associated with longevity in persons having larger volumes in a front part of the brain involved in planning and decision-making.
