

Letter to the Editor**Why Need Donors?**

Having read the story of Kyle and Chelsea in the Time Magazine, I retrieved on 7/4/2562 from: time.com/5562077/kidney-donor-married-couple/?utm_source=time.com&utm_medium=the-brief&utm_content=20190406..., suddenly remind me the technic of organ printing¹.

Kyle and Chelsea Froelich on their wedding day in 2013.

From: <http://time.com/5562077/kidney-donor-married-couple>

The story of the Indiana married couple, Chelsea Clair and Kyle Froelich, a kidney donor and a recipient accomplished in 2010. Now, in 2019, the kidney Chelsea donated is failing, and if Kyle does not get a new transplantation within the next year, he will be forced to go on dialysis for life.

To my opinion, if the technique of 3-D organ printing¹ has progressed to readily achieve the organ printing, there would be no problem in waiting for organ donation for transplantation any longer.
